# 3 Working Software

As per the "Working Software" requirement for our project, we have created a comprehensive video demonstration showing our application in action.

This video serves as evidence of our feature completion and showcases all the core features of the software working as intended. The demonstration covers the primary end-to-end workflows for our key user roles, from a Learning Advisor creating a new student contract to a Manager reviewing the statistical dashboard.

You can view the full video demonstration at the link below:

<https://youtu.be/E5qHOoTzWQo>

# 4 Project Presentation

*Each team is required to present its project work in a **15-minute** presentation and up to **10 minutes** for Q&A. The main goal is to sell each team's work to the teaching staff and peers. With a few exceptions (permitted by the instructor), everyone is required to deliver at least 2-minute talk as a part of the team's presentation.*

*The content includes:*

- *Problem statement, product position statement (from the Vision document), users/market.*
- *Project management: team structure and responsibilities of team members.*
- *Software requirements: use-case model, non-functional requirements.*
- *Analysis and design: architecture and technologies used.*
- *Software testing: test environments, test plan, test results, and automated testing.*
- *Demo: demo a key scenario of the software.*

*As the presentation will be delivered up to **15 minutes**, you are advised to prepare about 15-20 slides.*

*Presentation grading. The presentation is graded using three components: **content (30%), delivery (30%), and demo (40%)**. The first component checks whether the presentation has all elements provided above and whether they are correct, logical and comprehensive (e.g., whether the problem statement is clearly stated). The delivery requirement checks how well the group delivers the presentation. It is based on the organization, transition, English, clarity, and persuasiveness of the presentation. And the demo will check how much the team has done and whether the software is actually working.*
